

Neuron Song

Verse 1

A neuron is a cell of scientific fascination,
They receive, process and transmit information,
They allow us to think, solve problems and grow,
To learn the things we thought we could never know.

Chorus

My abilities can be developed,
With dedication and effort,
When I find the right strategy,
The one that works best for me.

Verse 2

Our brains have billions of neurons in a busy constellation,
Connected by branches in a network formation,
They fire in patterns, electrically,
Creating every feeling, thought and memory.

(Chorus)

Verse 3

Whenever I struggle, make mistakes and corrections,
I'm creating and strengthening my neuron connections,
Stimulating my brain and making it grow,
Making room for all the new amazing things I know.

(Chorus)
